"Bob Renaud Story" published in issues No. 18, 19, 20, 21, 22, and continued in subsequent issues of AFSCA.

2. Television Contacts:

"Bob Renaud Story". See Footnote 1. above.

3. We have a tendency to throw all the space visitors into one pot and call them "Space People" and refer to them as "they" as if they were one group, much in the same way as we talk about the seamen in the merchant marine who come from every conceivable place in the world.

You must realize that outer space, the whole cosmos or universe, is filled with people. Generally they are of appearance just as funny looking as the earthlings and are at various levels of advancement. Their space crafts travel throughout the cosmos and some of the underdeveloped people have come down to earth and have caused the more hair rising sighting reports or experiences.

When we say that they speak our languages, we mean that some of them only do, viz. the people or the people's representatives from Venus, Mars, and Saturn in particular, but also people from other planets within as well as beyond our solar system who have taught themselves the languages we speak today. The people from Venus, Mars, and Saturn in particular have kept closer contact with Earth through the ages and have had the need to keep their knowledge of our languages up to date only.

4. AFSCA issue No. 5.

5. Prof. Marcel F. Homet, one of the world's great archaeologists, following one of his many expeditions to Brazil's interior, wrote in a "recent" letter to a colleague, Prof. Hubert Malthaner, the following:

"I have taken no interest in Flying Saucers; they are not in my field. But if they exist, I can prove there were civilizations (10,000 years or more ago here on earth) that had a knowledge of flying ("they could go to Venus or wherever they wanted in the universe") and without doubt knew the atomic bomb, as a result of which their civilization was completely destroyed."

## Legal Clash Delays Trial Of Mazerall

### Admissability Of Commission Evidence Debated

OTTAWA, May 17—(C.P.)—Legal argument continued this morning as to whether evidence of Edward Mazerall, 30, gave before the Royal Commission on espionage should be admitted in his trial in Ontario Supreme Court. With the jury absent, Chief Justice J. C. McCrue directed that the argument not be reported by the press.

A former National Research Council engineer, Mazerall pleaded not guilty Monday to a charge of conspiring to communicate information to Russia. The argument was still proceeding at the noon adjournment and the Chief Justice told the jury members they would not be needed until tomorrow morning.

### Crown Contentions

The trial hinges on the Crown's contention that Mazerall conspired with several persons to communicate to Russia information he obtained in his Government position. Capt. David Gordon Luman, 30, one of those with whom he allegedly conspired, declined to testify yesterday when called to the witness box by Crown counsel. He held that his evidence, even though it could not legally be held against him, would hurt him in his own speedy trial tentatively scheduled before a County Court Judge May 31.

The Chief Justice declined to hold Luman in contempt of court and allowed him to leave the stand. His reason was "my view as to the signal importance of preserving a fair and impartial administration of justice."

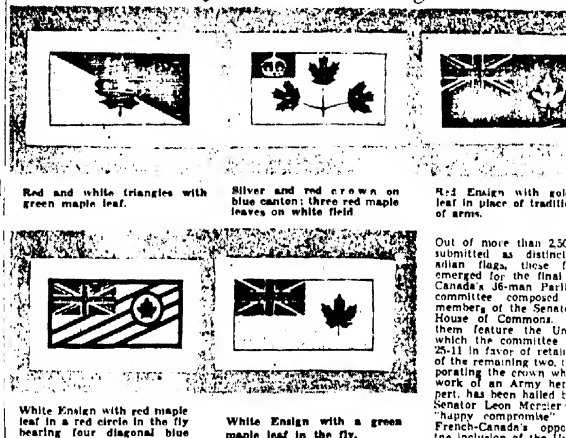

The Chief Justice rejected a defence request for postponement of the Mazerall trial until after that of Luman.

## U.N. Delays Albania Entry

### Application Stood Over to August

NEW YORK, May 17—(A.P.)—The United Nations Security Council today adopted unanimously a United States resolution which in effect delays immediate consideration of Albania's request for admission to the United Nations. The Council then adjourned subject to the call of the chairman. The resolution offered May 10 by Edward R. Stettinius, Jr., United States delegate, provided that all applications for United Nations membership submitted not later than July 1 shall be considered by the Council in August. Albania's application is the only one on file. Andrei A. Gromyko, Soviet delegate, called the Stettinius proposal "useless" in view of the new rules on admission adopted today by the Council but went along with the other delegates when the vote was taken. Poland's Delegate, Dr. Oscar

## A Grim Picture

### French Physicist Reveals New Type of Nuclear War

By Howard W. Blakeslee

NEW YORK, May 17—(A.P.)—A new type of nuclear war, using invisible atomic rays so secret that man might know nothing of its start, is forecast by Frederic Joliot, France's foremost physicist.

Dr. Joliot is one of the first two or three scientists to discover that a chain reaction could be produced in uranium. This discovery, rather than that of splitting atoms, led to bombs, atomic power and radioactive ray production. His forecast appears in the current issue of the bulletin of the atomic scientists, Chicago, and is from a talk he made in London.

### Security Gaps

"In the future," Dr. Joliot says, "a country feeling secure through having in its possession a hundred atomic bombs would one day be warned by its statisticians: 'For five years now they will say, the number of abortions (miscarriages) in the central districts has grown to such proportions that there is not one normal birth in six. In the coastal ports fires are destroying the harvests. The drought in the north has deprived the country of a quarter of its electrical energy.'"

"Official headquarters and parliamentarians will pore over these figures and will find one explanation—'for several years war has been waged against their country with immense destruction and a considerable number of victims. Yet no one had known that hostilities had broken out.'"

The sterility that Dr. Joliot mentions would come from x-rays of radioactive atomic materials, secretly spread about by enemy agents. He does not mention that there also would be other human injuries, nor explain how a country might fail to recognize the signs.

Dr. Joliot does not tell how hostilities would be started or the weather controlled. But he declared that "one day the pacific applications of this bomb doubtless could be used to transform the surface of large portions of the earth, to make clouds and to bring down rain over huge areas."

## Leopardmen Murder 200

### Nigerian Secret Sect Goes on Rampage

LONDON, May 17—(Reuters)—Grisly details of more than 200 mutilated corpses, their jugular veins ripped open by leopard claws, form the basis of a secret report on Nigeria's secret societies being sent to London from Lagos, Nigeria, marked for the immediate attention of Colonial Secretary George Hall.

The report deals with the mass murder outbreak among the age-old Nigerian Secret Society of Leopardmen. Little is known in London at the moment of the recent break-up among the blood-sucking leopardmen beyond the fact that more than 100 arrests have been made in connection with the murders. Twelve leopardmen have been convicted of murder and another 30 are awaiting trial.

The secret society was suppressed prior to the Great War, but the depletion of the administrative and police staffs in the province gave it an opportunity to start up again. The initiation rites into the society constitute a blood bond between man and leopard and observers who have studied the cult report that when a man dies the leopard to which he is bonded dies also. The reverse

## Sluron UN By Pole Di British Pro

### Fopd Allegedly For Political Es

LONDON, May 17—The British Government announced today that it tested formally to Poland a speech by Vice-Prem law Gomulka in which he said that UNRRA food was in Europe to further ends.

A Foreign Office disclosure that the British was handed to the Polish Secretary in Warsaw a Gomulka's remarks were inappropriately and the speech was made.

Complaint of Mr. Gomulka was quote ing that UNRRA food used to influence the Greece and Italy, while was "hostile to Polish be Poland usually is European" countries UNRRA supplies, the said, and 10000 recently diverted it went directly to Gdyni port.

"Our note states its efforts on behalf of Poland be met that Government will pr future that their aid served for those who appreciate it," the apo He said H. LAGI tor of UNRRA, also to Poland on behalf organization.

APPENDIX No. I

# THE CYCLES OF CHANGES IN THE EARTH

The following extracts are from a personal manuscript by John H. Tice, Meteorologist, and published privately by the officers and clerics of The Meteorological Research and Publication Company of St. Louis, Missouri, in 1875.

"For half a century scientists have earnestly been laboring to discover such a cycle, but without success. Yet every day the necessity for it becomes more evident and the demand for it more earnest and pressing. Professor Lowell, an English astronomer and renowned as a spectroscopist, expresses himself upon this subject as follows: 'In what other way as in Astronomy, the thing is to have a direct cycle, and if it is not to be found in the Temperature Zones, then go to the Fossil Zones, or to the Fossil Zones, and find it. If found, then above all things, and in what manner, try hard to find it, study it, record it, and see what it means....'

"Observation on several phenomena, such as aurora, solar physics generally, magnetic intensity in the Earth, electric tension both of the Earth and of the Atmosphere, auroras, earthquakes, cyclones, tempests, and general temperatures, have been made for half a century and some for nearly two centuries. Why then, after all this time, have not been more fruitful in what they have observed? The fact is, no one observer worked in a steadily and uniformly, the observations of his chosen field in a systematic way, without ever dreaming that there was a connection between all physical phenomena. After describing a period of 24 hours, equal to half the length of what the Eschscholus, the length of human life, which has been known to the human race, that has appeared in nature, we have had

[ 265 ]

205

## LEMURIA

periodicity, and repeated itself in a cycle between ten and twenty years....

"After having satisfied myself of the existence of meteorological cycles, about eight years ago, I undertook to investigate their cause with a view of determining their length. As nothing can exist without a cause, synchronous and co-existent phenomena, regularly repeating themselves in cycles of uniform length, must have a permanent cause that is common to them all; and whatever that may be and where ever located, it must be ascertainable and so capable of proof....

"In the preceding part of this work I have demonstrated that winds, rain, snow and hail storms, cyclones, auroras, earthquakes, in fine, all telluric and atmospheric phenomena, are electric; and that whatever may be the cause of the present condition of the Earth and the atmosphere, the electricity necessary to their production is constantly being generated but with varying energy....

"The testimony of the facts presented, incontestably establish these points that earthquakes have a periodicity in the frequency of their occurrence, and that they show well defined periods of maxima and minima, which alternate regularly as to time with each other. Examinations of the dates of their occurrences show that these maxima and minima are coarctant with those of other physical disturbances....

"Earthquakes are caused by disruptive discharges of electricity through the strata of the Earth. Electric currents, at all times, are circulating through the Earth from East to West. In times of physical perturbations, indicated by sunspots, auroras and great oscillations in the magnetic needle, earth currents, as they are called, often become too intense to be transmitted through the strata of the Earth, and where the strata are unbroken or of good conductive capacity. These currents where the strata are broken up, or of too feeble conductive capacity, become dammed up, and as they are strong enough to force a passage, which is effected by what is called a disruptive discharge."

ITEM "J"

## U.S. TAKING A SECOND LOOK AT ITS WORLD ROLE

Americans, pledged to defend 43 allies, find few of them rushing to assist the U.S. in Vietnam—or anywhere else.

Suddenly, the strain of carrying on alone is starting to cause concern, raise questions.

The biggest question: Is it time for the U.S. to pull in its horns, stop trying to police the entire world?

A major reappraisal of the U.S. role in the world is being forced by events.

In Europe, France is throwing roadblocks in the path of the Atlantic Alliance.

Strains are showing in the U.S. military establishment as a result of a small war in Vietnam.

There is a breakup in the alliance underwritten by the U.S. in Southeast Asia. The alliance backed by the U.S. in the Middle East never has gotten off the ground.

In today's world, the American people are committed to defend 43 nations—big and small. This is a commitment by fewer than 200 million Americans to defend 862 million people in much of the non-Communist world.

The one war being fought to fulfill one part of one commitment in a remote area of the world—Vietnam—is taxing the nonnuclear capabilities of U.S. land, sea and air forces.

**Danger ahead?** Now questions are being raised in Congress, within the military services, among diplomats.

What if another Vietnam should suddenly explode? Suppose Soviet Russia should grow aggressive again in Europe. What if a new Cuba blew up in Latin America? Or if Red China decided to start moving?

Is there the capacity in the armed forces of this country to deal with multiple wars—even if no larger than Vietnam? Would the use, or threatened use, of nuclear weapons then be forced?

And: How did the U.S. ever get into a position of responsibility for policing every corner of the globe?

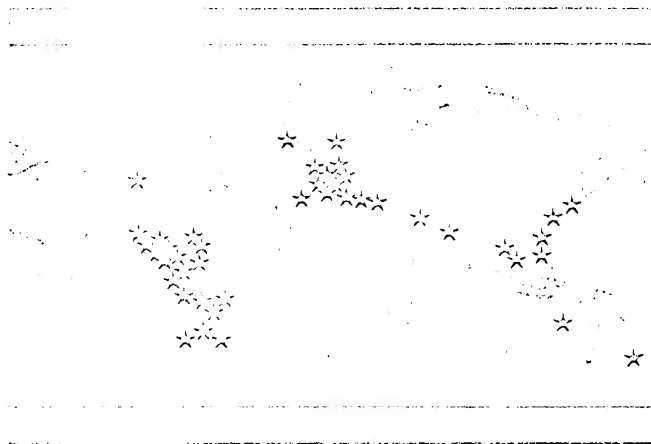

The answer given is that, when these commitments to 43 other nations were made, they rested upon alliances against

Communist expansion, in which other allies were expected to bear a fair part of the burden.

Today those alliances are found to be disintegrating. The allies themselves, with a few exceptions, usually appear uninterested in strengthening ties or adding to their military burdens to defend themselves or their areas. By itself, even

this view: "It should be more than obvious that the United States alone cannot protect the free world against the aggressive and expansionist designs of the Communist nations indefinitely."

Behind the growing concern is the finding of Senate investigators that, while the U.S. was never in better shape to fight an all-out nuclear war, it is not

when spending nearly 60 billion dollars a year for defense, the U.S. is having to struggle to do an effective policing job while tied down in Vietnam.

The strain of Vietnam is now changing the mood of many in this country about carrying the load alone.

On May 4, Senator Stuart Symington (Dem.), of Missouri, cautioned that the U.S. is "overcommitted" in its military pledges around the world and said steps must be taken to deal with the situation. Senator Symington, as a member of the Foreign Relations and Armed Services committees, sees many secret reports. He said that either overseas commitments should be reduced or "major changes" made in U.S. military readiness.

Chairman John Stennis of the Senate Preparedness Investigating Subcommittee is another calling for a new look.

in sound military shape otherwise. Where nuclear strategic power is concerned, the U.S. has quietly been expanding and modernizing a vast force of Air Force Minuteman and Navy Polaris missiles. These are weapons of mass destruction and, it is pointed out, of no value in a situation such as Vietnam.

In almost every respect other than strategic power, the Air Force and Navy are found to be stretched thin.

Airlift and sealift for emergencies outside Vietnam would be hard to mount on short notice. Tactical air power of both services is being worked overtime to keep up with needs in Vietnam. There is some concern expressed about the readiness of both the Atlantic Fleet and the Seventh Army in Europe if real trouble should break out there.

Dear \_\_\_\_\_

I thank you for your letter in response to the excerpt from (2)  
(2) The more you study the UFO subject  
the more you will realize, as I have done, that it will emerge as the greatest peace  
movement to which our modern man has ever been exposed. It is suggested that you  
make yourself ready to accept it.

I have requested (2)

to forward to you complimentary material which I trust will satisfy your need  
for list of reading material in addition to the above bibliography which was  
sufficient for me to reach my firm conclusion of the presents of the space people.  
I would like to ask you to pay due attention to the books by Dr. George Hunt "Ric"  
Williamson, a noted archaeologist, anthropologist, and flying saucer lecturer, who  
is listed in Who's Who in America (Volume 29) and several other like publications.  
The list of his books will come from AFSCA.

Yours sincerely,

(2)

(2)

P.S. Please expect the (2) material to take about 4-6 weeks.

Dear

UNIDENTIFIED FLYING OBJECTS

Your letters to the Prime Minister and the Executive Assistant to the Associate Minister of National Defence have been passed to Canadian Forces Headquarters for study and reply.

Like yourself, we have been interested in the visual sightings of unidentified flying objects for over ten years. At the time that many such sightings were being reported in the early 1950s, all reports available were studied together with many of the books summarizing still other information. While there were a number of incidents which were difficult to explain on a basis of natural phenomena, they were equally difficult to ascribe to visitations of extraterrestrial beings. It was therefore decided to await further evidence before making a firm decision one way or the other.

Since that time we have had an opportunity to see most reports of unidentified flying objects which have been sent to National Defence Headquarters. While there have been some quite remarkable sightings, we have been able to explain most cases on the basis of natural effects. One or two long investigations with which we were associated had aspects which required months of scientific study before an explanation could be given, but were finally solved.

The recent increase in sightings was quite similar to the period in the early 1950s and quite a number of unusual reports reached National Defence Headquarters. All were satisfactorily explained in terms of aircraft, cloud reflections, satellites, fire-balls, etc. We were interested to note in connection with the major fire-ball over the Eastern United States and Canada that one observer reported seeing a face looking out through a porthole. This we believe points up the difficulty of getting accurate reports on the sighting of aerial phenomenon.

2/10

.../2

You claim to have incontrovertible evidence that some of the reported sightings represent visitations from outer space. We believe that man will first become aware of another intelligence in the universe through radio, and although a number of experiments have been carried out, none has produced a signal which could be positively associated with intelligent beings. Perhaps you have something to offer in this regard.

You may wish to consider writing-up your facts for Canadian science in an article which could be submitted to the National Research Council for publication in one of its research journals.

Should you decide to write up the facts to which you refer, we would appreciate receiving a copy for our records.

Yours truly,

New Address

(2)

Dear Sir

Thank you for your letter of May 3rd. I wrote to the P.M. because I know something about it. Flying Saucers. During the past 13 years I have kept in constant touch with other interested people of various countries, my own collection of facts is extensive, including past excellent color photos of H.P. - space craft, also black and white. I know all about balloons etc. in connection with this subject. (2) late of the

His Ministry in Britain admitted that their balloon theory of the incident was no balloon, as for the local astronomer (2) they know far less about the subject than we do. One of them in the phone went almost into hysterics at the mention of space craft. Another one still believes that anyone who has not seen the men of the stars can not know anything, and he has never seen even half of the material that I have, far less in fact. As for the R.C.A.F. please ask them for their HONEST conclusion.

I have the physical material I sent them, after a landing of a craft 30 miles from Montreal in 1964 - St. Alexis de Montcelain.

I can show you 2 photos with the crew of a space craft looking at through

the Pallass. Does the R.C.A.F. have some under S.A.N.S.P. 146

200-2 & AFM. 194. etc. time limits the length of my

letter. yours sincerely.

②

Dear

②

The Honourable Leo Cadieux, Minister of National Defence, has asked me to inform you with reference to your letter of April 13, 1966, that reports of unidentified flying objects are by no means taken lightly by the Canadian Government.

The Government is concerned about this and other similar phenomena, both from the point of view of their possible scientific interest and with respect to their significance insofar as national security is concerned. So far none of the sightings reported have turned out to constitute a threat to national security but a number have been of interest from a scientific point of view, particularly to the National Research Council Meteor Centre.

A brief history of "unidentified flying objects" is attached which may be of interest to you.

Yours sincerely,

56 APR 11 AM 10 30

Dear Sir:

Your letter deals with a subject that is of great importance to all men, women and children living on this Planet. I am fully aware of the fact that there has been attributed to the subject about which I write, but taking into consideration all aspects added on a world wide basis, it is safe to say that much has been hidden from the public eye. Yesterday's Gazette it was reported that you stated in the House of Commons that the hygiene department is investigating reports about sightings of unidentified flying objects. Sir, you must excuse me if I doubt very much whether to general public will ever get an honest and truthful report from the government on such matters. To me & many people throughout the world who have for many years made a study of this subject, we are fully aware of the true facts and are thus able to accurately evaluate our government's statement, and to look forward to the day when the authorities will have the courage to share the truth, but with all due respect to you and your office, we doubt it.

217

very recently I personally saw Philippine...  
"by a S.H.P. near Manila in 1954. To  
the R.A.A.H. the fact in relation to this  
incident case, put it out of the way, just  
the R.A.A.H. did not have the... is  
their comment on the specimens of point of earth  
damaged by radiation that I had sent them. I  
commented on my photo of small holes that can also  
be seen by radiation during the landing near  
the base of Montecarlo, about 30 miles North  
of Manila in 1954, like one more of the  
holes in the R.A.A.H. number S.H.P.P. 145.  
1972, and A.F.M. 194. No doubt similar holes  
are in Senegal as they have in Britain since  
1954, too. This is a world wide issue many  
photographs both black and white and colour have  
been taken by both civilians and military all over  
the world and are readily available, in some particular  
cases it can be seen if the space craft can be seen  
any more through the portholes this fact I  
doubt (seriously) anyone in the world to  
deny. As my reason for writing this is if  
you have thousands of facts, it is to acquaint you  
with the fact that many people do know  
of the facts available that work can be  
done. I know, but all too often the  
facts are ignored. We do not dispute that

some lightness and of misrepresentation of nature.  
 phenomena. I, I have top secret I am, and I  
 by far the greater percentage, otherwise I am not  
 of what is their far superior business  
 ability just to them for various reasons - which  
 in fact, I think have been shown to be  
 showing their objects and aircraft in constant  
 view to in many parts of the world. I  
 amongst these of secretaries, my ft. the  
 lightness which is such many more from  
 before the bright horizon. Why an  
 collection of material you see is just while  
 day, because, is small compared to some,

in a Prime Minister I wanted you to it to  
 as public to give them to truth, man is a  
 because being and not compare to the  
 with a man proceed in his space research  
 program. He will learn many new things  
 that will be far more in and not later,  
 least might be too late.

your sincerely.

1. My memo S 2000-4 (SECDs) dated 26 May 66 was written at the request of Dr. Arnell and in consultation with Brigadier Kenyon (DGI) bearing in mind not only the publicity aspects but also the political implications of this report. The Associate Minister's office is also interested in any further information on this subject. It is requested that any further information on the circumstances of the UFO sighting, what, in detail, was seen and an assessment of the reliability of the observer would be of interest in this case.

2. In the light of my conversation with Dr. Arnell and Brigadier Kenyon, I find it difficult to accept their reported lack of interest in this case.

1. UFO reports received at CFHQ/CFOC are passed to NRC and SCDCTB (Dr. Arnell) who are responsible for collecting such data and making any necessary public releases. The information contained in ref. message ATU 1149 was requested by Dr. Arnell and, to our knowledge, contained sufficient detail for his purposes.

2. Incidentally DGI has no interest in having UFO reports passed to him.

Dear

(2)

Your letter of 9 April, 1966, addressed to the Department of Transport, which reported your observations of "flying objects", has been passed to me for study.

The descriptions you give of your sightings suggest that you have been seeing the ECHO satellites, which are very large balloons. These reflect sunlight and can usually be seen for about ten minutes at a time as they move across the sky. If one knows exactly where to look for them, it is sometimes possible to see one of these satellites three times in a single evening—once low in the east shortly after dark, again about two hours later overhead, and a third time to the west after another two hours. As they do not appear in the same place each night, but gradually move westward and are seen a little later each night, they can be seen in any one place for a few months at a time and will then not be visible for several months.

I have had the times of your sightings, together with the direction of travel, checked by personnel at the Dominion Observatory and the National Research Council, who observe different satellites. They are certain that most of your observations were made on the ECHO II satellite, which would have travelled from W-NW to S-SE in the evening and from a southerly to a northerly direction in the morning during December and January, and then after several months when you could not see it, would have appeared again moving in the reverse direction by early April, as its orbit had rotated halfway around the earth. ECHO I does not come as far north as ECHO II and therefore would have appeared to you to move from east to west, or from west to east, as reported by you on several occasions.

On 12 January, 1966, it would appear that you saw them both together—one moving W-N and the other N-SW. I once saw two satellites cross in a similar fashion about six years ago, and you are the only other person I have ever heard of doing the same thing. In my case, one was an American satellite and the other was a Russian one.

.../2

222

In your report you noted in two places that the moving object appeared to pause. I think that this must have been either an optical illusion or in looking away and back again, you briefly confused the satellite with a bright star or perhaps the satellite passed in front of a bright star and you missed it on the other side for a short time.

I found your report interesting and I want to compliment you on the obvious care you took with your records. Many reports which reach this department are too vague and inaccurate to be of any value. So that you will have a better idea of what you have been observing, I am enclosing brief descriptions of the two WCHO satellites. I might add that there are other satellites which are visible to the naked eye, but they are not nearly as bright as these two and are unlikely to be observed unless one knows exactly where and when to look.

I hope the above information will be of some interest and value to you.

Yours truly,

Sighting of a Meteor, Clarenceville Area,  
Co-operation with Armed Services.

APR 27 1966

25 APR 66

1. At approximately 11:00 P.M. a telephone call was received from (2) stating that this same date, whilst he was driving his vehicle in the Clarenceville, Que., area, he witnessed what he believed to be a meteorite in its fall. Details as obtained from (2) are being summarized according with par. 4, CO-Air, Operational Manual.

2.
  - (a) DATE AND TIME OF SIGHTING: 25 APR 66, 8:15 P.M.
  - (b) CONDITION OF SKY: Clear, moon shining.
  - (c) LOCATION OF OBSERVER: 1½ mile north of Clarenceville, Que., driving south.
  - (d) OCCURENCE OF BURSTS: None reported.
  - (e) LUMINOSITY: Very bright, compared to a manganese light.
  - (f) COLOUR: Very bright greenish blue, trail of red sparks.
  - (g) FORM: Round when afire, size of a \$0.50 piece, (Taken to be approximately the size of the moon.)
  - (h) DURATION: Fireball; about 3 seconds;  
Trail; about 1½ minute.
  - (i) SOUNDS: No sound heard.
  - (j) POSITION IN SKY: Estimated travelling at 7000 feet in the air, northerly direction. Observer was travelling south, was 1½ mile north of Clarenceville, Que., when he made the observation and the fireball was observed to his right or to the west of his position.
  - (k) OTHER OBSERVATIONS: (2) was accompanied by (2) of Clarenceville, Que., who also observed the fireball. (2) furthered that two (2) chunks remained after desintegration and each were about the size of a car. These chunks appeared to him to have fallen between Clarenceville and Noyan, Que., a few miles north of H'way #52.

(CONTINUED ON PAGE "2",....)

RE:

PAGE "2"

Sighting of a Meteor, Clarenceville Area,  
Co-operation with Armed Services.

.....CONTINUATION FROM PAGE "1".)

3. Mr. William A. Warren, 30 - 52nd Avenue, Lachine, Que., Regional Representative of the National Research Council Associate Committee was immediately informed by telephone of the details. Prior to this, S/Sgt. Berthiaume, Section N.C.O., had also been advised by telephone.

4. 26 APR 66  
Whilst attending to other police matters in the Clarenceville, Que., area, two other witnesses of the fireball in question residing on the east shore of the Richelieu River being to the west of (2) position, were interviewed. They both narrated their observation which is very similar in detail to (2) except that they did not observe any remaining chunks. They observed the fireball to the west of the Richelieu River and same was travelling towards Montreal, Que. From these observations we believe that (2) underestimated the fireball's height and position in relation to us.

CONCLUDED HERE.

UFO Sighting and Collection

- 1 The enclosed object has been positively identified as an oil breather cap from a Vauxhall automobile circa 1959-61.
- 2 If the cap did fall from a passing aircraft, it might have been due to a desperation substitute by an "amateur" mechanic on some private light aircraft. Since it is only a press fit, it could easily vibrate loose. This of course is pure conjecture.

MEMORANDUM

3 Sep 65

CO

Investigation Report  
UFO Sighting and Collection

1 With reference to S2000-4(DG1/1F4) dated Aug 65, the undersigned proceeded to Foster Quebec at 0615 hrs on the 3 Sep 65, and received from (2) in object which fell from the sky and landed in the (2) driveway.

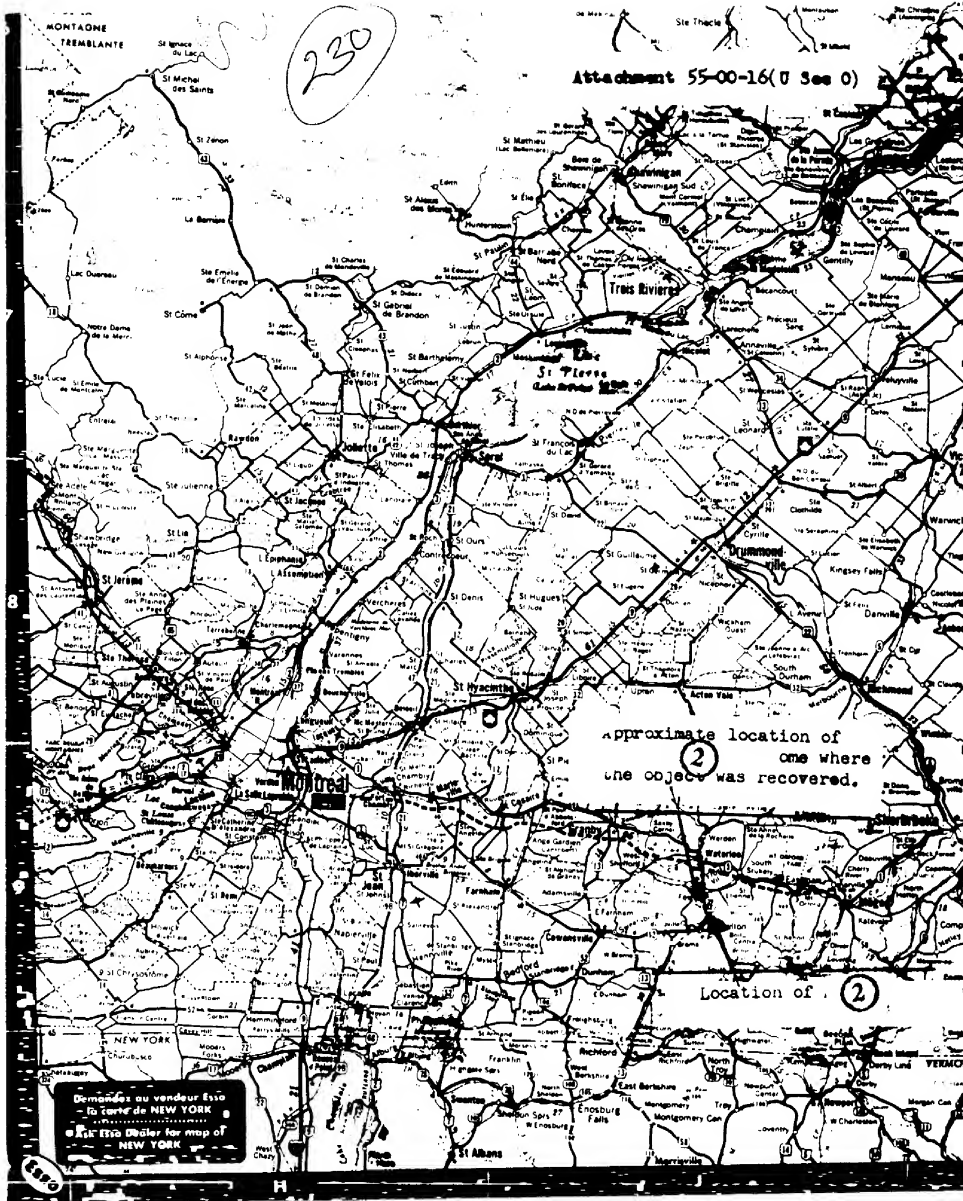

2 The following informations were also received from (2) and later confirmed by her son:

- (i) This incident took place on the 3 Aug 65 at approximately 1215 hrs in front of the (2) residence at Foster, que. See attached road map for approximate location.
- (ii) (2) said that he heard a whistling sound coming from the falling object instants before it hit the top of a tall tree located in front of his home. The boy who was riding his bicycle home at the time heard the object crashing through the branches to finally land a few feet in front of him in the driveway.
- (iii) He did not notice any large birds or aircraft flying in the area at the time.
- (iv) High wind prevailed at the time and he recalled that it required extra efforts to bicycle home. Also a great storm struck the area around mid-afternoon on that day.
- (v) The investigator also visited a (2) residing at Boulton (see map). This lady, a friend of the (2) when she heard of the falling object had mentioned to (2) hearing a strange noise at approximately the same time and date. When asked by the undersigned, she replied that on the 3 Aug 65 while the family was taking the noon meal, they all heard a noise resembling that of a car being driven wildly or a low flying aircraft. She had nothing else to add.
- (vi) Returning to base the undersigned showed the recovered object to CTSO and on his advice took it to Aircraft Industries Limited, St Jean, que, a civilian organisation servicing a/c belonging to this unit. It was learned that this item definitely did not come from an RCAF a/c and that it probably came from either a light a/c or an helicopter.

2 Included with this report is the object in question and a road map referred to in this report.

UFO Sighting and Collection

Reference: Enclosed letter from  
to 1

dated 19 Aug 65  
dated Aug 65

1. We recently received a letter from (2) of  
Foster, Quebec, stating that her son had nearly been struck by an  
object which fell from the sky; she asked if we would be interested in  
obtaining the object. We have enclosed a copy of the letter, and a  
copy of our reply.
2. We have no way of identifying the object without examining it,  
because it was not described in the letter, and in any event the  
government is interested in any UFO be it a meteorite, an aircraft part  
or a flying saucer. Would you please have someone visit (2)  
pick up the object, and send it to CFBQ/ACDS/DGI/DIP/IP 4.
3. Please have your investigator ask the son the following questions  
about the event, along with any others that appear pertinent.
  1. Was there any sound before the object hit the ground?
  2. Were any aircraft or large birds flying in the area?
  3. Were any thunderstorms or high wind conditions in the area?
4. Thank you for your co-operation.

(2)

Dear

(2)

Thank you for your letter of 19 August 1965, we are pleased that you took the time to inform us about your son's experiences.

The government is interested in any unidentified flying object be it a meteorite, an aircraft or aircraft part, or any other visible phenomenon. We are very interested in examining the part and have requested that the Commanding Officer of R.C.A.F. Station St. Jean send someone to visit you and your son, in the hope that you still have the object available.

Please ask your son to remember the event carefully, with special attention to the following questions.

1. Was there any sound before the object hit the ground?
2. Were any aircraft or large birds flying in the area?
3. Were any thunderstorms or high wind conditions in the area?

We thank you again for your letter and your interest; if the object turns out to be anything special, we will let you know.

Sincerely,

PLEASE NOTE.
